

## Hypertherm announces release of Production Manager for ProNest CAD/CAM nesting software

**HANOVER, N.H.— November 30, 2021**—Hypertherm, a U.S. based manufacturer of industrial cutting systems and software, today announced the release of Production Manager, an optional module for its ProNest® advanced CAD/CAM nesting software. This web-based module is designed to improve productivity, maximize machine up-time, boost on-time delivery, and increase material utilization.

Production Manager seamlessly integrates with Hypertherm's EDGE Connect® CNC, to automatically capture machine data without the need for operator intervention. In addition, it displays real-time production data so team members across an organization can track the status of job orders, the production schedule, and pending inventory requirements. Additional features include:

- **Dashboard view.** Intuitive dashboard view provides production stats and trends in one view. Color-coded status alerts help users quickly understand the on-screen information while an interactive display allows users to drill down for additional insight.
- **Real-time information.** Real-time machine data from the CNC is transferred to Production Manager. This enables users to track job progress from pending, to in-production, to actual completion time making it easier to respond to customer inquiries and forecast the production schedule.
- **Flexible intervention.** Cancel or hold orders to add or remove parts based on last-minute changes. Users can view machine backlogs and ensure loads are evenly distributed across cutting machines in a way that optimizes the production schedule.
- **Remote access.** Makes it easy for users to access Production Manager via a computer, mobile phone, or tablet anytime and anywhere users have a secured network or VPN connection.

“Production Manager takes the guess work out of an organization's daily operation by connecting everyone to the same information, in real-time to drive business cohesion and continuity,” said Tom Stillwell, Product Marketing Manager for Hypertherm software products. “Production Manager is also a great example of how Hypertherm hardware and software products work together to provide customers with new levels of automation and efficiency, something that is increasingly important as companies move toward a more digital shop floor. Production Manager further extends ProNest's reach across organizations by interfacing with all aspects of the cutting operation including sales, customer service, procurement, and management.”

Hypertherm engineers and manufactures industrial cutting products used by companies around the world to build ships, airplanes, and railcars, construct steel buildings, manufacture heavy equipment, and more. Its products include cutting systems, CNCs, and software trusted for performance and reliability that result in increased productivity and profitability for hundreds of thousands of businesses. Founded in 1968 and based in New Hampshire, Hypertherm is a 100 percent Associate owned company, employing more than 1,800 Associates, with operations and partner representation worldwide.
